Encapsulated Woodcore Raised Access Floor is a modular flooring system in which a high-density particleboard core is fully encased in galvanized steel or aluminum sheets on all surfaces and edges. This encapsulation provides excellent structural strength, moisture resistance, fire protection, and electrostatic discharge (ESD) control. Designed for environments that require underfloor cable management, airflow distribution, and static control, such as offices, data centers, control rooms, and telecommunication facilities, this type of floor offers both durability and flexibility. The surface can be finished with HPL, ESD PVC, ceramic, or other materials to suit different aesthetic and functional requirements. The system is installed on adjustable pedestals, allowing for easy access to underfloor services and reconfiguration of space. Combining performance, safety, and cost-effectiveness, encapsulated woodcore raised access floors are a key component in the infrastructure of modern intelligent buildings.
