The global Encapsulating Wet Process Equipment market size is predicted to grow from US\$ 218 million in 2025 to US\$ 266 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

Wet etching is a material removal process that uses liquid chemicals or etchants to remove materials from a wafer. The specific patterns are defined by photoresist masks on the wafer. Materials that are not protected by this mask are etched away by liquid chemicals. In wet etching, the material being processed is contacted with an acidic or basic chemical liquid to remove unwanted areas through a chemical reaction. The acidic or basic chemical liquid utilized in this process is called the etchant, which given its inexpensiveness is surpassing from a cost perspective.

The global encapsulating wet process equipment market refers to the industry that provides equipment for coating, encapsulating, and protecting various electronic components and devices using wet processes. This equipment is used in industries such as semiconductor manufacturing, electronics, and photovoltaics. The market for encapsulating wet process equipment is driven by the increasing demand for high-performance electronic devices with enhanced protection against moisture, heat, and other environmental factors.
