The closed voltage step-down soft starter is a device used to control the starting process of the motor. It can reduce the voltage and gradually increase the voltage when the motor starts, thereby reducing the current shock when the motor starts and protecting the motor and related equipment. Enclosed step-down soft starters usually consist of electronic devices, controllers and circuits that can monitor the starting conditions of the motor and adjust the voltage output accordingly to ensure smooth and reliable starting of the motor. This starting method helps extend the life of the motor, reduces equipment maintenance costs, and reduces the impact on the grid. Closed voltage-reducing soft starters are widely used in various motor systems in industrial production, such as pumps, fans, compressors, etc.

The global Enclosed Reduced Voltage Soft Starter market size is projected to grow from US\$ 1754 million in 2024 to US\$ 2550 million in 2030; it is expected to grow at a CAGR of 6.4% from 2024 to 2030.
