## Abstracts

The global Enclosure Cooler market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An enclosure cooler is a cooling solution designed for the interiors of enclosures such as electrical control panels and communication equipment, aiming to prevent overheating and maintain optimal operating conditions.

This device employs two primary cooling strategies: air cooling and water cooling. The air cooling technique draws external air into the enclosure through fans, filters out dust and particulates, and uses this cleaned air to reduce the interior temperature. Conversely, water cooling involves circulating coolant water around the enclosure, offering superior cooling capacity ideal for sensitive and precision equipment, albeit at a higher cost of installation.

Enclosure coolers find applications across a broad spectrum of environments, including industrial manufacturing sites, telecommunication infrastructures, healthcare facilities, data centers, and power generation plants. They consist of several key components such as cooling fans, air filters, heat exchangers, a coolant water system, and control units. Their benefits include protecting sensitive electronic components, compact design, reduced operational noise, and eco-friendly operation.

United States market for Enclosure Cooler is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Enclosure Cooler is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
