An end mill re-sharpener is a specialized machine tool designed to resharpen the cutting edges of end mills, which are rotary cutting tools used in milling machines for cutting various materials. The purpose of an end mill re-sharpener is to restore the cutting edges of worn or dulled end mills, extending their useful life and maintaining their cutting efficiency. End mill re-sharpeners can be manual, semi-automatic, or fully automatic, depending on the level of automation and the complexity of the resharpening process. End mill re-sharpeners are commonly used in machine shops, tool and die shops, and other manufacturing facilities where end mills are used frequently. By resharpening end mills instead of purchasing new ones, companies can save on tooling costs and reduce waste. The machines are particularly useful for high-volume production where the cost of resharpening can be justified by the frequent use of end mills.

The global End Mill Re-Sharpener market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
