End Suction Centrifugal Water Pump is a common centrifugal pump designed for conveying low-viscosity liquids such as water. Its characteristics are that the suction port is located at one end of the pump body, usually for horizontal water intake, and the discharge port is located at the top or side for vertical upward or horizontal discharge. Through the high-speed rotation of the impeller, the water is sucked into the pump body and accelerated and discharged from the outlet, completing the water conveying process. This type of pump has a compact structure, simple operation and easy maintenance, and is widely used in residential water supply, commercial building booster systems, industrial circulating water systems, and agricultural irrigation.
