The global Endocrine Disrupting Properties Assessment market size is predicted to grow from US\$ 204 million in 2025 to US\$ 320 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

Endocrine Disrupting Properties Assessment refers to the scientific and regulatory evaluation of whether a chemical substance, mixture, ingredient, material or active substance has properties that may interfere with the endocrine system and lead to adverse effects in humans or the environment. The assessment typically integrates existing toxicological data, endocrine activity screening, mechanistic evidence, apical adverse-effect studies, exposure and relevance considerations, and a weight-of-evidence judgement based on recognized regulatory frameworks and test guidelines. In market terms, it covers laboratory testing, data gap analysis, study design, dossier review, expert interpretation and compliance support for chemicals, pesticides, biocides, cosmetics ingredients, industrial materials and other regulated substances. OECD guidance focuses on standardized test guidelines for evaluating chemicals for endocrine disruption, including estrogen, androgen, thyroid and steroidogenesis-related modalities, while EU regulatory frameworks have established scientific criteria for identifying endocrine disruptors in biocidal and plant protection product areas.

The Endocrine Disrupting Properties Assessment market is becoming an increasingly important segment of chemical safety, regulatory toxicology and compliance testing services. Demand is mainly driven by stricter regulatory attention to chemicals that may interfere with hormonal systems, especially under European chemical, biocidal product and plant protection product frameworks. The market is not limited to a single laboratory test, but combines in vitro screening, in vivo toxicology data, mechanistic interpretation, weight-of-evidence evaluation, regulatory dossier preparation and expert review.

Service providers with strong experience in OECD test guidelines, ECHA and EFSA guidance, REACH, CLP, biocides, pesticides and cosmetics-related compliance are likely to gain advantages, because customers need not only test results, but also defensible scientific conclusions that can support product registration, substance approval, risk assessment and market access. OECD describes its work as supporting countries' needs for testing and assessment of chemicals for endocrine disrupters, while ECHA maintains an endocrine disruptor assessment process and list for substances under assessment.
