The global Endocutter Stapler market size is predicted to grow from US\$ 755 million in 2025 to US\$ 1171 million in 2031; it is expected to grow at a CAGR of 7.6% from 2025 to 2031.

The stapling technology has several advantages over the traditional suturing technology such as higher accuracy, consistency, and less time required as compared to suturing by hand. Staplers are more frequently used in surgeries on the lungs and the bowel, as stapler lines are more accurate and consistent, which leads to less chances of leakage of the bowel contents or blood. Endo staplers are largely used in laparoscopic and endoscopic surgeries. They are also used in thoracic, abdominal, pediatric, and gynecological surgeries for creation of anastomosis, resection, and transection. A disposable endo cutter stapler consists of two, triple-staggered rows of staples made of titanium, which can simultaneously break a tissue into two parts. The stapler size is determined by selecting different sizes of single cartridge viz. 2.5 mm, 3.5 mm, and 4.8 mm.

Endocutter Staplers are a type of stapler, mainly used to replace manual excision and suturing in surgical operations

Market competition pattern

Multinational medical device companies represented by Johnson & Johnson and Medtronic occupy an important position in the endoscopic stapler market. These companies have advanced technology and rich market experience, and their products enjoy a high reputation and market share worldwide.

Future development trend

Laparoscopic staplers replace open staplers: With the deepening of medical system reform and the improvement of residents' medical awareness, the popularization of minimally invasive surgery will drive the continued growth of the stapler market, and laparoscopic staplers are expected to gradually replace open staplers.

Electrification, intelligence, and platformization: Staplers have gradually entered the era of the third generation of electric staplers from the first generation of open surgical staplers and the second generation of laparoscopic staplers. Electric staplers will become the core variety of staplers in the future, with advantages such as high stability and fast speed, which can further reduce the burden on doctors, and the market size is expected to achieve rapid growth.

The penetration rate of minimally invasive surgery has increased: The penetration rate of minimally invasive surgery in China is still at a relatively low level. With the improvement of medical standards and the enhancement of residents' medical awareness, the clinical demand for minimally invasive surgery is huge, and the market size of laparoscopic staplers is expected to further expand.
