Endodontic handpieces are a type of dental handpiece specifically designed to clean and shape canals during root canal treatments. Whether reciprocating or rotating, these handpieces are designed to drive endodontic files with precision and to prevent binding or file breakage. When selecting an endodontic handpiece it is important to be sure it will work with your preferred file system and other operatory equipment.

The technical demands and level of precision required for successful performance of endodontic procedures have traditionally been achieved by careful manipulation of hand instruments within the root canal space and by strict adherence to the biologic and surgical principles, essential for disinfection and healing. To improve the speed and efficiency of the treatment, recently there has been a resurgence of mechanized or

automated system for both preparation and sealing of root canal system.
