The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs. Rising number of root canal procedures and rising geriatric population globally have increased the size of the endodontics market. Furthermore, the adoption of multi-spindle grinding machines providing better cutting capabilities and emerging technologies are also supporting the growth of the market. Factors such as rapidly growing geriatric population and increasing number of dentists and dental offices are majorly driving the endodontics market trends. Growing dental tourism, rising dental spending, and increasing disposable income further complement the market growth. However, limited reimbursement for dental procedures hampers the growth of the endodontics market. Lucrative growth opportunities in emerging countries and gradual shift to newer technologies and products will create new opportunities for future market growth.
