An endoscope cleaning station is a specialized device used in medical facilities to clean and disinfect endoscopes after they have been used in a medical procedure. Endoscopes are thin, flexible tubes with a light and camera on the end that are used to examine the inside of the body. Because endoscopes come into contact with bodily fluids and tissues during medical procedures, they must be thoroughly cleaned and disinfected to prevent the spread of infections between patients. An endoscope cleaning station typically includes a series of automated and manual cleaning steps, such as flushing the endoscope with water and cleaning solution, brushing the inside of the endoscope, and soaking it in a disinfecting solution. The cleaning station may also

include features such as a drying cabinet or forced air system to ensure the endoscope is completely dry before it is used again. Proper cleaning and disinfection of endoscopes is critical for patient safety and is an essential part of infection control in healthcare settings.
