The global Endoscope Main Unit market size is predicted to grow from US\$ 2925 million in 2025 to US\$ 4435 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

The endoscope main unit is the core control and imaging processing platform of an endoscopy system. It typically integrates image acquisition and processing units, light source control, video processing and enhancement algorithms, power management, and interface and data storage modules. It is used for real-time processing, display, recording, and transmission of signals from the endoscope probe or camera. As the central device of the entire endoscopy system, it is widely used in clinical settings such as digestive endoscopy, interventional respiratory surgery, minimally invasive surgery, urology, gynecology, and otolaryngology. In 2025, global endoscope main unit sales were approximately 260,000 units, with an average unit price of approximately US\$11,500 and a capacity utilization rate of approximately 76%. Upstream suppliers mainly include image processing SoC and FPGA manufacturers, display and video interface chip manufacturers, medical power supply and light source control module suppliers, precision structural component and heat dissipation device manufacturers, and system software and algorithm platform providers. Downstream suppliers include endoscope manufacturers, medical device brand owners, and hospitals and medical groups. The market also includes regional distributors and system integrators. The industry's gross profit margin is approximately 52%. In terms of product cost structure, image processing and main control boards account for approximately 22%, light sources and light source control modules for approximately 18%, display and video interfaces and storage modules for approximately 10%, power supplies and safety components for approximately 9%, chassis and heat dissipation structures for approximately 8%, software and image algorithm platforms for approximately 12%, system integration and assembly for approximately 7%, testing and certification for approximately 6%, and logistics, management, and sales expenses for approximately

8%. The demand list mainly includes endoscopy center expansion, high-definition and 4K system upgrades, multi-department shared host configurations, increased minimally invasive surgery volume, and teaching and remote consultation applications. Downstream customers include tertiary hospital endoscopy centers, regional medical groups, specialized hospitals, teaching hospitals, and head endoscope system integrators. Business opportunities arise from the aging population driving increased endoscopy volume, new medical infrastructure and equipment upgrade policies, upgrades to 4K and AI-enhanced imaging technologies, and hospitals' changing consumer demands for higher imaging quality, higher system stability, and lower long-term maintenance costs.
