According to our (LP Info Research) latest study, the global Endoscopic Single Port Surgical Robot market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Endoscopic Single Port Surgical Robot is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Endoscopic Single Port Surgical Robot market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Endoscopic Single Port Surgical Robot are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Endoscopic Single Port Surgical Robot. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Endoscopic Single Port Surgical Robot market.

The endoscopic single-hole surgical robot is composed of a doctor's console, a patient's operating platform, a three-dimensional electronic laparoscope, surgical instruments and accessories, and is used for urological laparoscopic operations. Using single-hole operation can reduce the number of abdominal openings in patients, and has the advantages of less trauma for patients and faster postoperative recovery period. At the same time, the product's endoscope and surgical instruments have multiple active degrees of freedom, which can complete complex surgical operations in a small space, and the external robotic arm can remain still during the operation, avoiding the risk of

collisions during the operation.

Endoscopic single-hole surgical robot is one of the future development directions of surgical robot.
