According to our LPI (LP Information) latest study, the global Endoscopic Ultrasound (EUS) market size was valued at US\$ 636.8 million in 2023. With growing demand in downstream market, the Endoscopic Ultrasound (EUS) is forecast to a readjusted size of US\$ 894.9 million by 2030 with a CAGR of 5.0% during review period.

The research report highlights the growth potential of the global Endoscopic Ultrasound (EUS) market. Endoscopic Ultrasound (EUS) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Endoscopic Ultrasound (EUS). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Endoscopic Ultrasound (EUS) market.

Endoscopic ultrasound (EUS) is a minimally invasive procedure to assess digestive (gastrointestinal) and lung diseases. Endoscopic ultrasound is a highly technical, low-risk diagnostic procedure that utilizes high-frequency ultrasound during endoscopy to evaluate and diagnose digestive tract disorders.

A significant driver in the endoscopic ultrasound (EUS) market is the increasing demand for minimally invasive diagnostic and therapeutic procedures. EUS provides high-resolution imaging of the digestive and respiratory tracts, enabling precise and less invasive examinations and interventions. However, a notable challenge in this market is the need for specialized training and expertise among healthcare professionals. Performing EUS procedures requires specific skills and training, which can be a limiting

factor in its broader adoption. Ensuring that an adequate number of medical practitioners are trained in EUS techniques and have access to the necessary equipment is essential for realizing the full potential of this advanced medical technology.
