End-of-line packaging refers to the final packaging stage before a product leaves the factory, after completing the preceding processes such as production, filling, and labeling. Automated equipment handles processes like boxing, sealing, palletizing, wrapping, labeling, inspection, and unitized logistics. It solves the problems of low efficiency, high labor costs, high error rates, inconsistent packaging, significant logistics losses, and difficulty in meeting the demands of large-scale production inherent in traditional manual packaging. This enables companies to achieve a highly efficient, standardized, traceable, and low-cost outbound packaging process. The product has an average price of approximately US\$280,000, with global sales of approximately 2,946 sets.
