The global Energy Market Operation System market size is predicted to grow from US\$ 2570 million in 2025 to US\$ 3720 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

The energy market operation system is the core technical platform and rule framework that supports the market-oriented trading and efficient operation of various energy commodities such as electricity, natural gas, and carbon quotas. The system integrates modules such as transaction management, real-time scheduling, network modeling, financial settlement and market monitoring to realize the coordinated operation of energy production, transmission, consumption and storage under complex market rules. Its core goal is to use price signals to guide the optimal allocation of resources, ensure the safety and reliability of the energy system, and ensure that all market participants can trade in a transparent and fair environment.

The prospects of the energy market operation system are extremely broad, and the core driving force comes from the deep global decarbonization and digital transformation of energy. In the future, the system will evolve in the direction of high coupling, real-time and intelligence to support the volatility management of the power grid with a high proportion of wind and solar, distributed resource aggregation and trading, and cross-border and cross-regional market interconnection. Artificial intelligence and blockchain technology will be deeply integrated to achieve more accurate predictions, automatic transaction execution, and trusted traceability of green electricity and green certificates. With the addition of new market players such as hydrogen energy and energy storage, the system will expand into a comprehensive operation platform covering multi-energy flows, multi-time scales, and multi-commodity types, becoming a key infrastructure for building a new energy system and ensuring energy security and achieving climate

goals.
