The global Energy Meter Calibration Device market size is predicted to grow from US$ 1562 million in 2025 to US$ 2284 million in 2031; it is expected to grow at a CAGR of 6.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The energy meter calibration device is a special test equipment used for accuracy verification, function detection and performance evaluation of energy meters (watt-hour meters). It is widely used in power companies, measurement and testing institutions, energy meter manufacturers and scientific research institutions. The device simulates the actual power grid conditions, provides accurately controllable input signals such as voltage, current, frequency, phase, etc., and combines high-precision reference standard meters and measurement and control software systems to realize the automatic calibration of single-phase or three-phase energy meters under different load conditions, such as error tests, start-up tests, creep tests, clock error tests, communication tests, etc. Modern energy meter calibration devices mostly adopt modular design, have multi-station synchronous calibration capabilities, and support multiple communication protocols (such as DL/T 645, IEC 62056, Modbus, etc.), and can perform efficient detection of various types of mechanical, electronic, and intelligent energy meters.

United States market for Energy Meter Calibration Device is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
