The global Energy Recovery Units market size is predicted to grow from US$ 1571 million in 2025 to US$ 2311 million in 2031; it is expected to grow at a CAGR of 6.6% from 2025 to 2031.

Energy recovery unit, with common name variations including ERV air exchangers and ERV ventilation systems. ERVs are systems designed to be connected to the ducts that are part of your HVAC system. By way of two fans, ERVs draw clean, fresh air into a home or office and remove stale air. Systems feature a patented heat exchanger which facilitates the transference of heat and moisture between the air streams. This way, your home will retain its heat during the process, something particularly significant during the winter months.

Government Incentives and Policies: Various government incentives, tax credits, and policies promoting the adoption of renewable and energy-efficient heating solutions encourage homeowners to invest in heat recovery systems.

Rising Energy Costs: Increasing energy costs prompt homeowners to seek energy-saving solutions. Heat recovery systems provide a way to recover and reuse heat, thereby reducing energy bills and overall heating costs.
