The global Engine Brake market size is predicted to grow from US\$ 743 million in 2025 to US\$ 995 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

This report studies the Engine Brake market, general is compression release brake or exhaust brake.

A compression release brake (also known as a Jacobs brake or 'jake brake'), is the type of brake most commonly confused with real engine braking; it is used mainly in large diesel trucks and works by opening the exhaust valves at the top of the compression stroke, resulting in adiabatic expansion of the compressed air, so the large amount of energy stored in that compressed air is not returned to the crankshaft, but is released into the atmosphere.

An exhaust brake works by causing a restriction in the exhaust, much like the intake throttle causes in a gasoline engine. In simple terms, it works by increasing the back-pressure of the exhaust. Nearly all of these brakes are butterfly valves similar to a throttle valve, mounted downstream of the turbocharger if there is one.

The major players in global Engine Brake market include Jacobs, VOLVO, Ennova, etc. The top three players of Engine Brake account for approximately 85% of the total market. North America is the largest market of Engine Brake accounting for about 41%, followed by Europe and China. In terms of Type, Hydraulic Type is the largest segment, with a share about 82%. And in terms of Application, the largest application is Above 15 MT, followed by 11-15 MT.
