Engine control motor is the equipment that controls the operation of vehicle engine. It is also called engine control actuator or engine control valve. The engine control motor is a kind of motor used in modern cars to control the amount of air entering the engine and the timing of the engine fuel injection system. The engine control motor is responsible for adjusting the intake air and fuel injection of the engine to optimize engine performance and fuel efficiency. It works by opening and closing the valve that controls the air flow into the engine. By adjusting the amount of air entering the engine, the engine control motor helps to ensure that the engine operates at the correct speed and efficiency.
