The global Engine Flywheel Ring Gear market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The role of the engine flywheel ring gear:

1. The main function of the flywheel is to store the energy and inertia outside the power stroke of the engine. At the power output end of the crankshaft, that is, the side connected to the gearbox and connected to the working equipment;
2. The flywheel has a large moment of inertia. Since the work done by each cylinder of the engine is discontinuous, the engine speed also changes. When the engine speed increases, the kinetic energy of the flywheel increases to store energy; when the engine speed decreases, the kinetic energy of the flywheel decreases to release energy. A flywheel can be used to reduce speed fluctuations during engine operation.
3. In addition, the flywheel has the following functions: the flywheel is the active part of the friction clutch; the flywheel ring gear for starting the engine is inlaid on the flywheel rim; the top dead center mark is engraved on the flywheel, used To calibrate ignition timing or fuel injection timing, and to adjust valve clearance.

United States market for Engine Flywheel Ring Gear is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
