The global Engine Mounting Brackets market size is predicted to grow from US\$ 3297 million in 2025 to US\$ 4730 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

In 2025, global Engine Mounting Brackets production reached approximately 37.44 million units , with an average global market price of around US\$90 per unit.

An engine mounting bracket is a key structural connection component in the automotive powertrain system, used to rigidly or semi-rigidly connect the engine and transmission to the vehicle body or subframe, working together with engine mounts to provide stable support and vibration isolation for the powertrain. Its primary function is to bear the weight and operational loads of the engine while transmitting and damping vibrations and shocks generated by the powertrain, thereby improving vehicle NVH performance, structural safety, and driving comfort. Engine mounting brackets are typically made of high-strength steel, aluminum alloys, or cast iron, and manufactured through stamping and welding, casting, or machining processes. They are widely used in ICE, hybrid, and electric vehicles as essential structural components in powertrain and chassis integration systems.

The upstream of engine mounting brackets includes high-strength steel, aluminum alloys, cast iron materials, rubber vibration isolators, fasteners, and anti-corrosion coatings. Representative companies include ArcelorMittal, POSCO, Novelis, Constellium, Continental, Hutchinson, and Schaeffler. The midstream consists of engine mounting bracket design and manufacturing companies specializing in stamping, welding, casting, machining, and structural optimization, including Magna, Martinrea, and Kente Auto Parts, with strong capabilities in structural component manufacturing

and large-scale production. The downstream mainly includes OEM automakers such as Toyota, Volkswagen, BMW, Mercedes-Benz, Ford, Tesla, BYD, Geely, SAIC, and NIO, where engine mounting brackets are widely used in powertrain mounting and suspension systems across ICE, hybrid, and electric vehicles.

The engine mounting bracket market continues to develop under trends of vehicle electrification, lightweighting, and platformization. Products are evolving from traditional steel structures toward lightweight aluminum and highly integrated designs, working together with engine mounts to optimize NVH performance and structural rigidity. With rapid EV growth, engine mounting brackets are increasingly extending into electric drive structural applications, requiring higher levels of lightweight design, modular integration, and load-bearing capability. Demand is mainly driven by rising EV penetration and vehicle architecture upgrades, while raw material price volatility, increasing manufacturing complexity, and OEM cost pressures remain constraints. Overall, the market maintains stable growth and continues to move toward high-performance, lightweight, and integrated solutions.
