Engine sound insulation pads are a type of sound insulation material specifically used in the engine compartment of a car, designed to reduce the noise generated when the engine is running, thereby improving the quietness and driving comfort of the car. Usually, sound insulation pads are installed on the inside of the engine hood or other key parts of the engine compartment, which can effectively isolate and absorb the sound waves emitted by the engine and reduce the noise transmitted into the car. In addition to excellent sound insulation effects, engine sound insulation pads also have good high temperature resistance and fire resistance, ensuring that no combustion occurs in high temperature environments, providing additional safety protection.
