The global Enhanced Flooded Battery (EFB) and Absorbent Glass Mat (AGM) Battery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

EFB battery is an enhanced rich liquid battery, which is characterized by the ability to adjust the concentration of electrolyte by adding distilled water. The remaining space of the battery tank, excluding the plates, baffles, and other solid assembly components, is completely filled with sulfuric acid electrolyte, hence it is called a "rich liquid" battery. AGM (Absorbent Glass Mat) battery is a type of lead-acid battery that uses a special glass mat separator to fix the electrolyte in place. This design makes the battery spill resistant, as the electrolyte is absorbed into the pad, preventing it from moving freely inside the battery compartment. Compared with traditional rich liquid lead-acid batteries, this feature makes AGM batteries safer and more durable. As two representatives of start stop batteries, EFB and AGM batteries can meet the needs of car start stop.
