The global Enteral Pump market size is predicted to grow from US\$ 666 million in 2025 to US\$ 915 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

Enteral pumps are medical devices used to deliver liquid nutrition, medications, or fluids directly into a patient's gastrointestinal tract. They are commonly used for patients who are unable to consume food or medications orally due to various medical conditions. Enteral pumps provide a precise and controlled method of delivering essential nutrients to patients, ensuring they receive the necessary sustenance and treatment.

The market for enteral pumps has been steadily growing. This growth is primarily driven by an aging population, rising instances of chronic diseases, and the need for accurate and controlled enteral feeding. As the global population continues to age, there is an increasing need for medical devices like enteral pumps to support the healthcare and nutritional needs of elderly patients. Chronic conditions such as stroke, neurodegenerative diseases, and gastrointestinal disorders can necessitate long-term enteral feeding, contributing to the demand for enteral pumps. Ongoing technological advancements have led to the development of more user-friendly and feature-rich enteral pumps, improving patient care and convenience. A growing trend in home healthcare and the preference for treatment in a familiar environment have expanded the market for portable and user-friendly enteral pumps.
