The global Enteral Stents market size is predicted to grow from US\$ 142 million in 2025 to US\$ 203 million in 2031; it is expected to grow at a CAGR of 6.2% from 2025 to 2031.

Enteral stents are defined as stents deployed within the stomach, small bowel and colon. Enteral stents are designed to treat malignant luminal obstruction of the gastrointestinal tract. Although their use is primarily for palliation of malignant obstruction, they can also be used within the colon as a pre-operative modality.

Drivers of the Enteral Stents Market

The enteral stents market is primarily driven by the rising prevalence of gastrointestinal (GI) cancers and other obstructive GI disorders. These stents provide a minimally invasive solution for maintaining lumen patency, improving the quality of life for patients with conditions like esophageal, colorectal, or gastric obstructions. Technological advancements, such as self-expanding metal stents (SEMS) with improved biocompatibility and anti-migration properties, further boost market demand. Additionally, the growing adoption of endoscopic procedures over traditional surgical methods due to reduced recovery time and lower risk contributes to market expansion.

Challenges in the Enteral Stents Market

The market faces challenges such as complications associated with stent placement, including migration, perforation, and restenosis, which can limit their effectiveness. High costs of advanced stents and endoscopic procedures can also be a barrier, particularly in low- and middle-income regions. Furthermore, a lack of skilled professionals in

certain areas may hinder the adoption of enteral stenting procedures, as their success heavily depends on the expertise of the healthcare provider. Addressing these challenges requires continuous innovation and broader access to training programs for medical professionals.

Global enteral stents manufacturers include Boston Scientific, Cook Medical, AELLA-CS etc. The top 1 company holds a share about 53%. North America is the largest market, with a share about 52%, followed by Europe with the share about 25%. In terms of product, duodenal stent is the largest segment, with a share over 45%. And in terms of application, the largest application is hospital, followed by clinic.
