An enteric softgel capsule is an oral drug delivery system encapsulated in a gelatin-based shell designed to release its contents in the small intestine rather than the stomach. The gelatin shell, which may include glycerin and plasticizers, is flexible and easy to swallow. This specific formulation prevents the premature release of the encapsulated substance, making it suitable for drugs or supplements sensitive to gastric acids. Enteric softgel capsules are commonly utilized in the pharmaceutical and nutraceutical industries, offering benefits such as enhanced drug absorption, reduced gastrointestinal side effects, and improved patient compliance, especially for individuals with specific health considerations.

The global Enteric Coated Softgels For Consumer Health Supplements market size is projected to grow from US\$ 1860 million in 2024 to US\$ 2373 million in 2030; it is expected to grow at a CAGR of 4.1% from 2024 to 2030.
