The global Enterprise AIOps Platform market size is predicted to grow from US\$ 2270 million in 2025 to US\$ 5282 million in 2032; it is expected to grow at a CAGR of 13.0% from 2026 to 2032.

An enterprise AIOps (Artificial Intelligence for IT Operations) platform is a new-generation intelligent operations system that integrates big data, machine learning, and automation technologies, designed to enhance the observability, fault prediction capabilities, and response efficiency of enterprise IT infrastructure and applications.

The development of enterprise AIOps platforms is primarily driven by the increasing complexity of IT system architectures, the widespread adoption of cloud-native and microservices technologies, the explosive growth in operational data volume, and enterprises' ever-rising demands for business continuity and efficient incident response. Traditional manual operations struggle to cope with the massive volume of alerts and the need for rapid fault localization within multi-cloud and hybrid environments; conversely, the maturation of AI and big data technologies has enabled automated anomaly detection, root cause analysis, and intelligent self-healing capabilities. Furthermore, the accelerating pace of digital transformation is compelling enterprises to leverage intelligent solutions to reduce operational costs, optimize resource utilization, and support agile delivery?thereby driving the accelerated adoption of AIOps platforms across sectors such as finance, telecommunications, the internet, and large-scale manufacturing.
