Abstracts

The global Enterprise Records Management Software market size is predicted to grow from US$ 79.36 million in 2025 to US$ 112 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Enterprise Records Management Software is an information platform for systematically controlling the entire lifecycle of enterprise information, from its generation to its final disposal. Its core purpose is to ensure the compliance, accessibility, and security of information assets, while optimizing operational costs. Based on enterprise content management, the software places greater emphasis on adhering to international and national regulations and industry standards, implementing strict policy management for all types of structured and unstructured data. By implementing this system, enterprises can significantly reduce legal and compliance risks, avoid penalties for improper information retention, improve employee retrieval efficiency, reduce time spent searching for documents in massive amounts of data, and lower physical storage and IT management costs. Ultimately, it helps enterprises transform fragmented documents into controlled and valuable strategic assets, providing a solid foundation for compliant and efficient operations during digital transformation.

Demand and Opportunity Analysis: The current surge in enterprise data and increasingly stringent compliance regulations have created a rigid demand for record management software. The core business opportunity lies in replacing traditional, fragmented management methods with automated, full-lifecycle information governance solutions for heavily regulated industries, thereby mitigating legal risks and improving operational efficiency. The market is expanding from large enterprises to SMEs, and its integration with cloud services and AI technology is fostering a new blue ocean of intelligent, vertically-oriented solutions.

China market for Enterprise Records Management Software is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Enterprise Records Management Software is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Enterprise Records Management Software players cover IBM, Deel, Guru, Klippa DocHorizon, Lark, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.

Report Scope

LPI (LP Information)' newest research report, the “Enterprise Records Management Software Industry Forecast” looks at past sales and reviews total world Enterprise Records Management Software sales in 2025, providing a comprehensive analysis by region and market sector of projected Enterprise Records Management Software sales for 2026 through 2032. With Enterprise Records Management Software sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Enterprise Records Management Software industry.

This Insight Report provides a comprehensive analysis of the global Enterprise Records Management Software landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyses the strategies of leading global companies with a focus on Enterprise Records Management Software portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Enterprise Records Management Software market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Enterprise Records Management Software and breaks down the forecast by Type, by Application, geography, and market size to highlight
