Environment-Friendly Bag should have two definitions. One is made of natural materials and can be reused; On the other hand, it means that solid waste will not remain in the natural environment after it is broken, causing harm to the environment (or the harm to the environment is very small compared with other materials). General plastic bags are difficult to degrade after being discarded in the environment. Even a small part of them will produce harmful substances after decomposition. The use of environmental protection bags can avoid such environmental pollution.
