The global Environmentally Friendly Fluoroprotein Foam Fire Extinguishing Agent market size is predicted to grow from US\$ 24.54 million in 2025 to US\$ 35.93 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Environmentally friendly fluoroprotein foam fire extinguishing agent is an environmentally friendly fire extinguishing product specially designed for extinguishing liquid fires, such as oil, chemical and fuel fires. Its main ingredients include fluorinated surfactants and protein hydrolysates, which can quickly form an isolation foam layer on the fire surface, block the oxygen supply, suppress combustible vapors, and achieve effective fire extinguishing effects. This fire extinguishing agent has high environmental protection and strong decomposition properties. It is suitable for industrial facilities with high environmental protection requirements, including oil depots, chemical plants and airports. At the same time, it can maintain fire extinguishing effects at lower concentrations, reducing usage and environmental impact.

The environmentally friendly fluoroprotein foam fire extinguishing agent market benefits from the increasing environmental awareness and the demand for low-toxic and low-pollution fire extinguishing agents. This type of foam fire extinguishing agent has both rapid fire extinguishing and environmental protection characteristics, and is mainly used in high-risk industries such as petrochemicals, chemicals, and oil and gas storage. As the global requirements for sustainable development become increasingly stringent, the market is expected to usher in significant growth. The research and development of innovative products will further promote market expansion, especially products that meet multiple environmental standards, which are expected to become the focus of future market competition.
