Environmentally friendly fully automatic oil separation equipment is an efficient equipment used to separate oil-water mixtures, especially to remove grease, floating oil and other oily substances from wastewater or sewage. The equipment uses multiple principles such as physics and chemistry to efficiently separate oil and water, ensure that the water quality meets the discharge standards, and reduce environmental pollution. The fully automatic system has self-monitoring and automatic adjustment functions, and can automatically complete operations such as oil-water separation, cleaning oil residue, and discharging purified water without human intervention, thereby improving processing efficiency and reducing labor costs and operational risks. Environmentally friendly fully automatic oil separation equipment is widely used in the catering industry, petrochemical industry, sewage treatment plants, industrial production and other fields, especially suitable for treating oily wastewater, helping enterprises meet environmental protection requirements, reducing the impact on water resources and the ecological environment, and promoting sustainable development. Its high efficiency, energy saving, and automation make it have important application value in the field of environmental protection.
