## Abstracts

The global Environmentally-friendly Latent Curing Agent market size is predicted to grow from US\$ 67.84 million in 2025 to US\$ 110 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Environmentally friendly latent curing agents are functional additives that remain stable (inert) when mixed with resin at room temperature, delaying the reaction and only activating curing under specific conditions (such as heating, humidity, and light). They typically feature low VOC emissions, low odor, and high safety, and are widely used in single-component adhesives, powder coatings, and composite materials, significantly improving ease of application and meeting green environmental protection requirements.

Environmentally friendly latent curing agents are usually based on imines, formed by the reaction of amine compounds (such as diamines) with aldehydes or ketones. Raw materials typically include aromatic or alicyclic diamines and ketone-aldehyde compounds. They feature low VOC emissions, low odor, good compatibility with polyurethane or epoxy resins at room temperature, and rapid decomposition and curing upon exposure to moisture.

Global sales in 2025 were approximately 5,000 tons, with an average selling price of US\$13,870 per ton. The industry's gross profit margin was between 20% and 30%.
