The global Enzyme Modified Dairy and Cheese Ingredients market size is predicted to grow from US\$ 904 million in 2025 to US\$ 1342 million in 2031; it is expected to grow at a CAGR of 6.8% from 2025 to 2031.

Enzyme Modified Ingredients are specially extracted by an enzymatic process in which the milk proteins and lipids are incubated with the help of enzymes under controlled conditions. This process helps to improve and enhance the overall flavour and aroma of the ingredient giving a richer and better food product on application. Dairy ingredients manufactured with this process have almost 15-30 times stronger flavour than the traditional ingredient. This because the compounds which dilute the flavour of the product are segregated from the dairy giving it more defined and intense taste. EMDI includes products like cheese, butter, cream, and ghee. With the increase in demand for flavoured beverages especially dairy-based flavoured beverages, the market for EMDI is expanding at a quick pace. The intense flavour, creamy texture, and extraordinary mouthfeel provided by these ingredients are what make it a key raw material in many products that help to improve the overall quality of the final product. There has been a growth in food products having flavours of cheese, butter, and cream providing an opportunistic market for the manufacturers as the consumers want the best of ingredients at reasonable prices.

Global key players of Enzyme Modified Dairy and Cheese Ingredients include Kerry, Symrise, Dairy Farmers of America, First Choice Ingredients, EPI Ingredients, etc. The top five players hold a share about 35%. Europe is the largest market for Enzyme Modified Dairy and Cheese Ingredients and has a share about 35%, followed by North
