The global EO Q-Switches market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electro-optic Q-switching is used in situations where very high switching speeds are required for Q-switched microchip lasers. In this case, the polarization state of light is changed by the acousto-optic effect (Pockels effect), and then a polarizer is used to convert the change in polarization state into a modulation of the loss. Compared with acousto-optic devices, it requires higher voltages (needed to achieve nanosecond switching speeds), but does not require RF signals.

United States market for EO Q-Switches is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for EO Q-Switches is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
