The global EO Residual Testing market size is predicted to grow from US\$ 2776 million in 2025 to US\$ 4616 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

EO Residual Testing, also known as Ethylene Oxide Residual Testing, is a crucial analytical process used to detect and quantify the remaining amounts of ethylene oxide (EO) on or within a product following its exposure to ethylene oxide gas during sterilization or other related processes. Given that ethylene oxide is a potent and potentially hazardous chemical, this testing is essential in industries like medical device manufacturing, pharmaceuticals, and food processing to ensure product safety. It precisely determines the level of EO residuals, as excessive amounts can pose risks to human health, including irritation, sensitization, and potential carcinogenic effects.
