EOL testing machine is a device used to detect the performance and reliability of electronic equipment. It is widely used in the production, maintenance and upgrading of electronic products, especially in the fields of automobiles, electronics, energy, etc., and is of great significance to ensure the performance and reliability of products. Based on electronic measurement technology, the EOL testing machine sends signals to the device under test and collects its response signals through a preset test program, thereby analyzing the performance parameters and reliability indicators of the device. Its working principle involves multiple parts such as test controller, test interface, test fixture and test software. Among them, the test controller is the core part, which is responsible for controlling the entire test process and generating test signals.

United States market for EOL Testing Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
