TPV (thermoplastic vulcanizate) is a type of thermoplastic elastomer (TPE) that combines the properties of vulcanized rubber and thermoplastics. It is typically produced by dynamically vulcanizing a rubber phase (such as EPDM or nitrile rubber) in a thermoplastic matrix (such as polypropylene). This process creates a material with excellent elasticity, resilience and weatherability, similar to vulcanized rubber, but with the processing advantages of thermoplastics, such as ease of molding and recyclability. TPVs are used in a variety of applications, including automotive seals, weather stripping and industrial parts.
