The global Epifluorescence Microscopes market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Epifluorescence microscope is a fluorescence microscope in which the illuminating light and the emitted light can pass through the same objective lens through the combination of mirrors. A parallel beam of light is passed directly upwards through the sample, maximizing the amount of illumination. This is also referred to as widefield microscopy. Epifluorescence microscopy is widely used in cell biology as the illumination beam penetrates the full depth of the sample, allowing easy imaging of intense signals and co-localization studies with multi-colored labeling on the same sample.

United States market for Epifluorescence Microscopes is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Epifluorescence Microscopes is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
