Epoxy mortar is a polymer-based bonding paste that comprises materials such as epoxy resins, solvent, binder, mineral fillers and some additives. The epoxy element is a two-component organic polymer that is blended with sand and, sometimes with coarse aggregate. Epoxy mortar with or without the aggregate will provide an impermeable environment and barrier that will protect reinforcing steel against corrosion. The certain measurements are dependent on the desired properties after curing. It is used as an adhesive and paste for structural repair. It can also be used to fill gaps, cracks and vents in driveways, patios and plazas. In setting tasks, it is used for tile installation where sealers are not required.
