The global Epoxy Resin Water-Based Curing Agent market size is predicted to grow from US\$ 959 million in 2025 to US\$ 1420 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

Epoxy resin water-based curing agent is a curing agent for epoxy resin, mainly used to improve the performance and application range of epoxy resin. Compared with traditional solvent-based curing agents, water-based curing agents have lower volatile organic compound (VOC) emissions, are more environmentally friendly, and are safer during use.

The growing focus on sustainable and eco-friendly solutions is one of the major trends driving the market. Water-based curing agents for epoxy resins have become increasingly popular in coatings applications, particularly for architectural coatings, industrial coatings, and automotive finishes. These waterborne systems provide the same high-performance characteristics as traditional solvent-based systems but with significantly lower VOC emissions, making them a safer and more environmentally responsible alternative.

As governments and organizations implement stricter environmental regulations and push for green chemistry, companies are increasingly turning to low-VOC or zero-VOC formulations to comply with air quality standards, such as the EPA (U.S. Environmental Protection Agency) and EU REACH regulations.

Significant advancements in the development of waterborne epoxy resins and curing agents have improved their performance and application properties. These improvements have made water-based epoxy systems increasingly competitive with

traditional solvent-based systems in terms of:

Durability: Enhanced resistance to abrasion, chemicals, UV light, and weathering.

Curing Speed: Faster curing times due to innovations in curing mechanisms, making them more efficient in industrial applications.

Adhesion Strength: Improved adhesion to a wide range of substrates, including metals, plastics, wood, and concrete.

Flexibility: Epoxy resins with water-based curing agents are offering greater flexibility and toughness compared to older formulations.

Hybrid systems are also emerging that combine water-based epoxy resins with other low-VOC curing agents, enabling even better performance for demanding applications such as industrial coatings and automotive finishes.

The construction industry, particularly for infrastructure applications, is a major driver of the water-based epoxy curing agent market. These curing agents are used in floor coatings, concrete sealers, pavement maintenance, and protective coatings due to their durability and long-lasting protection against abrasion, chemicals, and moisture.

The push for green building certifications (such as LEED and BREEAM) is driving the demand for eco-friendly materials, including waterborne coatings and sealants. Water-based epoxy curing agents align with these sustainable building practices and contribute to the growing trend of green construction.
