EPS panels refer to expandable polystyrene panels that are manufactured using polystyrene beads that are expanded to more than 50 times their size through a chemical process that uses heat. Once they've melded, they're compressed between PPGI sheets into varying sizes of EPS blocks through different moulds. These are further cut and shaped for different industry requirements. They are also customizable and can be manufactured in different densities as per client requirements.

EPS Panel Containers provide space-saving, durable and efficient thermal protection for virtually any temperature-sensitive shipping application.
