Equine Antisera and Antitoxin Products refer to a class of passive immunotherapy biologics derived from hyperimmune horse plasma obtained after immunization with venoms, bacterial toxins, viral antigens, or other specific immunogens, followed by purification, enzymatic digestion, viral inactivation, formulation, and sterile filling. Major commercial products include snake antivenoms, equine rabies antisera, equine tetanus immunoglobulins, as well as selected diphtheria antitoxins, botulism antitoxins, and scorpion antivenoms. Upstream raw materials and inputs mainly include immunized horses, venoms or toxoids/antigens, plasma collection and fractionation materials, enzymes, purification reagents, stabilizers, packaging materials, and cold-chain logistics, while downstream customers are primarily hospital emergency departments, trauma treatment centers, envenomation treatment institutions, public health agencies, and government stockpile systems. Based on a comprehensive assessment of the global antivenom and antitoxin market scale, the operating size of major manufacturers, regional pricing levels, and industry supply-demand structure, global production capacity for Equine Antisera and Antitoxin Products is estimated at approximately 19.4 million vials in 2025, with sales volume of about 15.68 million vials, an average ex-factory price of around US\$92 per vial, and gross margins generally in the range of 45%?72%.
