Er doped crystals are crystal matrices doped with erbium (er) ions to facilitate laser operation in the mid-infrared and telecommunications spectral regions. These crystals exhibit strong absorption and emission bands around 1.5 microns, making them suitable for amplifying optical signals in fiber optic communication systems. Er-doped crystals are essential components in erbium-doped fiber amplifiers (edfas) used for signal amplification and transmission in long-distance optical networks, offering efficient signal processing and noise suppression capabilities.
