According to our LPI (LP Information) latest study, the global Erythrocyte Sedimentation Tube market size was valued at US\$ 144.1 million in 2023. With growing demand in downstream market, the Erythrocyte Sedimentation Tube is forecast to a readjusted size of US\$ 216.9 million by 2030 with a CAGR of 6.0% during review period.

The research report highlights the growth potential of the global Erythrocyte Sedimentation Tube market. Erythrocyte Sedimentation Tube are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Erythrocyte Sedimentation Tube. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Erythrocyte Sedimentation Tube market.

An erythrocyte sedimentation tube, also known as an ESR tube or Westergren tube, is a specialized laboratory instrument used to measure the rate at which red blood cells (erythrocytes) settle or sediment in a vertical column of blood under the influence of gravity. The ESR test, also called the sedimentation rate or sed rate test, is a nonspecific indicator of inflammation or other underlying conditions in the body.

According to the Global Use of Medicines 2023 released by IQVIA Institute, the global drug expenditure in 2022 was about US\$1.48 trillion (excluding COVID vaccine and treatment-related expenses), and it is predicted to grow at a rate of 3%-6% in the next few years. In terms of drug expenditure, this number in China was about 166 billion

dollars in 2022. It is expected that the expenditure on medicines will increase in the next few years. From the perspective of demand, the trend of population aging, the increase of residents' wealth and the improvement of health awareness will drive the demand for medicines.

Global Use of Medicines 2023 shows that the U.S. market spent about US\$ 62.9 billion on medicines in 2022 on a net ex-factory basis. Overall growth slows as the Inflation Reduction Act (IRA) spends US\$64 billion to reduce prescription drug prices, and the adoption of new treatments is expected to increase over the next few years. Besides, ex-factory discounts and rebates in drug distribution, the impact of patent expiration, and generic or biosimilar competition will also affect the U.S. pharmaceutical market.
