## Abstracts

The global Escalator Double-Row Brush market size is predicted to grow from US\$ 162 million in 2025 to US\$ 246 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

In 2025, global production of escalator double-row brushes reached 4.87 million meters, with an estimated average selling price of US\$34 per meter. Escalator double-row brushes are a reinforced type of escalator safety brush. They are typically installed near the edges of the steps and skirts on both sides of escalators or moving walkways. They consist of two rows of parallel bristles, an aluminum alloy or stainless steel base, fixing profiles, end caps, and connectors. Double-row brushes offer a wide bristle coverage, clear tactile feedback, and strong anti-sway and anti-pinch warning effects. They are primarily used in escalator scenarios with high passenger density, high operating frequency, and higher safety redundancy requirements. Their core function is not cleaning, but rather reminding passengers to keep their feet, shoelaces, clothing, and soft-soled shoes away from the gap between the steps and skirts, reducing the risk of entrapment and entanglement. Applications include shopping malls, subway/railway stations, airports, hospitals, schools, office buildings, hotels, convention centers, large commercial complexes, public buildings, rail transit hubs, and moving walkways. The upstream of the industry chain mainly includes PA/PP/PBT brush filaments, flame-retardant masterbatch, aluminum alloy profiles, stainless steel parts, plastic end caps, fasteners, and packaging materials; the midstream includes industrial strip brush manufacturing, brush filament implantation/pressing, aluminum profile extrusion processing, bending and forming, cutting and assembly, and quality inspection; the downstream includes escalator manufacturers, maintenance companies, rail transit operators, airports, commercial properties, and public buildings. Gross profit margins range from approximately 25% to 45%.
