Abstracts

The global Escalator Pressure Roller market size is predicted to grow from US$ 286 million in 2025 to US$ 398 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2024, global production of escalator pressure rollers reached 894,200 units, with an average selling price of US$312.73 per unit.

Escalator pressure rollers are key components of the step system or transmission device. Their core function is to maintain a safe gap between the steps and the skirt board (skirt board) through elastic contact or dynamic clamping mechanisms, preventing passengers' clothing, shoelaces, or foreign objects from getting caught in the gap and causing "entanglement-dragging" accidents. Simultaneously, in the transmission system, they are responsible for clamping the handrail belt, step chain, or drive chain, ensuring the stability and continuity of power transmission.

The gross profit margin for escalator pressure rollers is 16.83%, with a gross profit of US$52.63. Single-line production capacity is 35,000-45,000 rolls per year.

The upstream supply of escalator pressure rollers focuses on high-wear-resistant metal materials and elastomers, such as aluminum alloy/stainless steel substrates (representative companies: Baowu Steel, Hebei Iron & Steel Group), polyurethane/nitrile rubber wheel rims (Wuxi Baosong Roll Manufacturing, Dalian Baofeng Rolling Mill), supplemented by precision machining equipment (turning, milling, and grinding machines, dynamic balancing machines) and lubrication system components. Downstream supply covers escalator manufacturers (such as Otis, Mitsubishi, and Kone), public transportation hubs (subways, airports, train stations),

commercial complexes (shopping malls, hospitals), industrial settings, and elevator maintenance companies. Through applications via general contractors and elevator service providers, the ultimate goal is to achieve smooth escalator operation, reduced vibration and noise, and extended equipment lifespan, forming a complete closed-loop industrial chain from material supply to end-user maintenance.
