The global ESD 3D Resin market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

ESD (Electrostatic Discharge) 3D resin is a specialized type of resin that is used in 3D printing to create objects with electrostatic discharge protection. ESD is a critical consideration in industries where the build-up and discharge of static electricity can cause damage to sensitive electronic components or equipment. Applications for ESD 3D resin include the production of components and prototypes for electronics manufacturing, aerospace, automotive, medical devices, and other industries where electrostatic discharge poses a risk. By using ESD 3D resin, these industries can benefit from the production of custom-designed parts with ESD protection, avoiding potential damage to electronic components during assembly, testing, and operation.
