The global ESD Antistatic PEEK Rod market size is predicted to grow from US\$ 108 million in 2025 to US\$ 148 million in 2032; it is expected to grow at a CAGR of 3.5% from 2026 to 2032.

In 2025, global PEEK ESD Electrically Conductive Rod production reached approximately 2,000 tons with an average global market price of around US\$ 55,000 per ton, and a gross profit margin of approximately 20%-40%. An ESD antistatic PEEK rod is a semi-finished engineering plastic bar made from polyether ether ketone (PEEK) that has been modified—most commonly with conductive or dissipative fillers such as carbon fiber, carbon black, or other conductive additives—to provide controlled electrical resistivity for electrostatic discharge (ESD) protection. Compared with unfilled PEEK, which is an excellent electrical insulator, ESD-grade PEEK is engineered to dissipate charge and reduce electrostatic buildup that could damage sensitive electronics or create particle attraction in clean environments. It retains many of PEEK's core advantages, including high temperature capability, chemical resistance, high strength and stiffness, wear resistance, and dimensional stability, while adding a surface and/or volume resistivity window suitable for ESD-safe handling and precision components.

Upstream, the supply chain includes PEEK base resin production, conductive/dissipative fillers (carbon fiber, carbon black, nanotubes or specialty additives), coupling agents and stabilizers, and compounding equipment and know-how to achieve uniform dispersion and consistent resistivity. Midstream activities involve melt compounding to create ESD-grade PEEK pellets, then extrusion (or compression molding and subsequent machining) to form rods with controlled diameter, tolerance, and property uniformity; quality control typically covers resistivity, mechanical properties, thermal performance, and contamination/defect inspection, with optional

certification for semiconductor or medical cleanliness. Downstream demand comes from precision machining shops and OEMs in semiconductors and electronics manufacturing, test and measurement, aerospace, chemical processing, and high-end industrial equipment; aftermarket activity includes repeat orders for wear parts, qualification of alternate grades, and value-added machining of rods into finished ESD-safe components as production programs scale.

United States market for ESD Antistatic PEEK Rod is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for ESD Antistatic PEEK Rod is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for ESD Antistatic PEEK Rod is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
