ESD notch filters are electronic components designed to suppress or filter out electromagnetic interference (EMI) and electrostatic discharge (ESD) in electronic circuits. They work by creating a high-impedance path for EMI and ESD signals, while allowing desired signals to pass through unaffected.

ESD notch filters are typically used in applications where electromagnetic interference and electrostatic discharge can cause damage to electronic components, such as in automotive, industrial, and consumer electronics. They can be used in a variety of electronic devices, including mobile phones, computers, and automotive electronics.
